

Linux Ubuntu 26.04 Manual Pages on command 'cloud-id.1'

\$ man cloud-id.1

CLOUD-ID(1) General Commands Manual CLOUD-ID(1)

NAME

cloud-id - Report the canonical cloud-id for this instance

SYNOPSIS

cloud-id [-h] [-j] [-l] [-i <INSTANCE_DATA>]

DESCRIPTION

cloud-id is the lowercase name of the cloud datasource discovered.

The cloud-id will be 'not run' when systemd generator has not run yet. The cloud-id will be 'disabled' when cloud-init is disabled or when ds-identify did not find a valid datasource.

See cloud-init status --long for more information.

OPTIONS

-h, --help

Show help message and exit

-j, --json

Report all standardized cloud-id information as json

-l, --long

Report extended cloud-id information as tab-delimited string

EXIT STATUS

- 0 On success
- 1 Due to an error
- 2 Due to cloud-init in a disabled state. See: cloud-init status --long
- 3 The cloud-init generator and discovery has not yet run.
