\$ man coshf.3

cosh(3) Library Functions Manual cosh(3)

NAME

cosh, coshf, coshl - hyperbolic cosine function

LIBRARY

Math library (libm, -lm)

SYNOPSIS

```
#include <math.h>
```

```
double cosh(double x);
```

```
float coshf(float x);
```

```
long double coshl(long double x);
```

Feature Test Macro Requirements for glibc (see feature_test_macros(7)):

```
coshf(), coshl():
```

```
_ISOC99_SOURCE || _POSIX_C_SOURCE >= 200112L
```

```
|| /* Since glibc 2.19: */ _DEFAULT_SOURCE
```

```
|| /* glibc <= 2.19: */ _BSD_SOURCE || _SVID_SOURCE
```

DESCRIPTION

These functions return the hyperbolic cosine of x, which is defined mathematically as:

$$\cosh(x) = (\exp(x) + \exp(-x)) / 2$$

RETURN VALUE

On success, these functions return the hyperbolic cosine of x.

If x is a NaN, a NaN is returned.

If x is +0 or -0, 1 is returned.

If x is positive infinity or negative infinity, positive infinity is returned.

If the result overflows, a range error occurs, and the functions return +HUGE_VAL, +HUGE_VALF, or +HUGE_VALL, respectively.

ERRORS

See `math_error(7)` for information on how to determine whether an error has occurred when calling these functions.

The following errors can occur:

Range error: result overflow

`errno` is set to `ERANGE`. An overflow floating-point exception (`FE_OVERFLOW`) is raised.

ATTRIBUTES

For an explanation of the terms used in this section, see `attributes(7)`.

??

? Interface	? Attribute	? Value ?

??

? <code>cosh()</code> , <code>coshf()</code> , <code>coshl()</code>	? Thread safety ? MT-Safe ?
---	-----------------------------

??

STANDARDS

C11, POSIX.1-2008.

HISTORY

C99, POSIX.1-2001.

The variant returning double also conforms to SVr4, 4.3BSD.

BUGS

In glibc 2.3.4 and earlier, an overflow floating-point (`FE_OVERFLOW`) exception is not raised when an overflow occurs.
