Git Manual

GIT-SH-I18N(1)

NAME

git-sh-i18n - Git's i18n setup code for shell scripts

SYNOPSIS

```
. "$(git --exec-path)/git-sh-i18n"
```

DESCRIPTION

This is not a command the end user would want to run. Ever. This documentation is meant for people who are studying the Porcelain-ish scripts and/or are writing new ones.

The 'git sh-i18n' scriptlet is designed to be sourced (using `.`) by Git's porcelain programs implemented in shell script. It provides wrappers for the GNU gettext and `eval_gettext` functions accessible through the `gettext.sh` script, and provides pass-through fallbacks on systems without GNU gettext.

FUNCTIONS

gettext

Currently a dummy fall-through function implemented as a wrapper around `printf(1)`. Will be replaced by a real gettext implementation in a later version.

eval_gettext

Currently a dummy fall-through function implemented as a wrapper around `printf(1)` with variables expanded by the `git-sh-i18n--envsubst(1)` helper. Will be replaced by a real gettext implementation in a later version.

GIT

Part of the `git(1)` suite
