

## ***Linux Ubuntu 26.04 Manual Pages on command 'grdctl.1'***

***\$ man grdctl.1***

GRDCTL(1)

User Commands

GRDCTL(1)

NAME

grdctl - Command line tool for configuring GNOME Remote Desktop

SYNOPSIS

grdctl [OPTION...] [COMMAND] [SUBCOMMAND...]

DESCRIPTION

grdctl provides methods for configuring the GNOME Remote Desktop service, for example setting credentials.

OPTIONS

--help

Show help text.

GENERAL COMMANDS

status

Show current status.

RDP COMMANDS

rdp enable

Enable the RDP backend.

rdp disable

Disable the RDP backend.

rdp set-auth-methods AUTH-METHOD...

Set a comma separated list of authentication methods. Available methods are credentials and kerberos. The kerberos method is only supported by the headless and screen share runtime modes. At least one auth method must be set.

rdp set-tls-cert TLS-CERT

Set path to TLS certificate.

rdp set-tls-key TLS-KEY

Set path to TLS key.

rdp set-kerberos-keytab KERBEROS-KEY-TAB

Set the path to a Kerberos keytab. When configured with the kerberos auth method, this keytab will be used for authenticating remote users.

rdp set-credentials USERNAME PASSWORD

Set username and password credentials.

rdp clear-credentials

Clear username and password credentials.

rdp enable-view-only

Disable remote control of input devices.

rdp disable-view-only

Enable remote control of input devices.

## BUGS

The bug tracker can be reached by visiting the website

<https://gitlab.gnome.org/GNOME/gnome-remote-desktop/issues>. Before sending a bug report, please verify that you have the latest version of gnome-remote-desktop. Many bugs (major and minor) are fixed at each release, and if yours is out of date, the problem may already have been solved.
