### NAME

gvfsd-fuse - Fuse daemon for gvfs

### SYNOPSIS

gvfsd-fuse PATH

### DESCRIPTION

gvfsd-fuse maintains a fuse mount to make gvfs backends available to POSIX applications. The mount point for the fuse filesystem is provided by the [PATH] argument.

gvfsd-fuse is normally started by gvfsd(1). In this case, the mount point is

\$XDG\_RUNTIME\_DIR/gvfs or \$HOME/.gvfs.

### OPTIONS

-d

Enable fuse debug output. This implies -f.

-f

Run in the foreground.

-s

Run single-threaded.

-o OPTION

Set a fuse-specific option. See the fuse documentation for a list of these.

### EXIT STATUS

On success 0 is returned, a non-zero failure code otherwise.

### SEE ALSO

gvfs(7)
