\$ man handlebars.1

HANDLEBARS(1) User Commands HANDLEBARS(1)

NAME

handlebars - Extension to the Mustache templating language

SYNOPSIS

handlebars [template|directory]...

DESCRIPTION

Precompile handlebar templates.

OPTIONS

- f, --output
Output File
[string]
- map Source Map File
[string]
- a, --amd
Exports amd style (require.js)
[boolean]
- c, --commonjs
Exports CommonJS style, path to Handlebars module [string]
[default: null]
- h, --handlebarPath
Path to handlebar.js (only valid for amd-style) [string]
[default: ""]
- k, --known

Known helpers

[string]

-o, --knownOnly

Known helpers only

[boolean]

-m, --min

Minimize output

[boolean]

-n, --namespace

Template namespace [string] [default: "Handlebars.templates"]

-s, --simple

Output template function only.

[boolean]

-N, --name

Name of passed string templates. Optional if running in a simple mode. Required when operating on multiple templates.

[string]

-i, --string

Generates a template from the passed CLI argument. "-" is treated as a special value and causes stdin to be read for the template value. [string]

-r, --root

Template root. Base value that will be stripped from template names.

[string]

-p, --partial

Compiling a partial template

[boolean]

-d, --data

Include data when compiling

[boolean]

-e, --extension

Template extension. [string] [default: "handlebars"]

-b, --bom

Removes the BOM (Byte Order Mark) from the beginning of the templates.

[boolean]

-v, --version

Prints the current compiler version

[boolean]

--help Outputs this message

[boolean]

handlebars 4.7.7
