\$ man hwctl.1

HWCTL(1) General Commands Manual HWCTL(1)

NAME

hwctl ? CLI tool to check hardware certification status

SYNOPSIS

hwctl

hwctl [-h | --help] [-V | --version] [--server URL]

DESCRIPTION

The hwctl utility checks the Ubuntu Hardware Certification status of your system.

hwctl verifies whether your exact machine model or a similar system has been certified and displays which Ubuntu releases the certification covers for it. For more information about the Ubuntu Hardware Certification Program, visit the certification website: <https://ubuntu.com/certified>.

Note that root privileges are typically required to run this command.

OPTIONS

-h, --help

Print help information and exit.

-V, --version

Print version information and exit.

--server URL

Specify the API server URL. This overrides the default value and the HW_API_URL environment variable.

ENVIRONMENT

HW_API_URL Specifies the hardware-api server URL that hwctl uses for certification queries.

The default value is <https://hw.ubuntu.com>.
