\$ man localsearch-index.1

LOCALSEARCH-INDEX(1)

LocalSearch manual

LOCALSEARCH-INDEX(1)

NAME

localsearch-index - List and change indexed folders

SYNOPSIS

localsearch index

localsearch index --add [--recursive] <dir> [[dir] ...]

localsearch index --remove <path> [[dir] ...]

DESCRIPTION

This command causes the LocalSearch indexer to process the given directories. These changes are persistent across future restarts.

If invoked without arguments, the currently indexed locations will be listed.
