

Linux Ubuntu 26.04 Manual Pages on command 'mailodf.1'

\$ man mailodf.1

MAILODF(1) User commands MAILODF(1)

NAME

mailodf - Email ODF file as HTML archive

SYNOPSIS

mailodf [-f from] [-s subject] inputfile recipients...

DESCRIPTION

mailodf is a program that will create a MIME-encapsulated web archive and then sends it as an email. Most email programs that understand HTML understands this format.

?Inputfile? is assumed to be an OpenDocument file of text, spreadsheet or presentation type.

REFERENCES

HTTRACK (<http://www.httrack.com/>) can create such archives with the -%M option.
