\$ man npm-logout.1

NPM-LOGOUT(1)

General Commands Manual

NPM-LOGOUT(1)

NAME

npm-logout

Synopsis

<!-- AUTOGENERATED USAGE DESCRIPTIONS -->

Note: This command is unaware of workspaces.

Description

When logged into a registry that supports token-based authentication, tell the server to end this token's session. This will invalidate the token everywhere you're using it, not just for the current environment.

When logged into a legacy registry that uses username and password authentication, this will clear the credentials in your user configuration.

In this case, it will only affect the current environment.

If --scope is provided, this will find the credentials for the registry connected to that scope, if set.

Configuration
