

Linux Ubuntu 26.04 Manual Pages on command 'npm-prefix.1'

\$ man npm-prefix.1

NPM-PREFIX(1)

General Commands Manual

NPM-PREFIX(1)

NAME

npm-prefix

Synopsis

<!-- AUTOGENERATED USAGE DESCRIPTIONS -->

Note: This command is unaware of workspaces.

Description

Print the local prefix to standard output. This is the closest parent directory to contain a package.json file or node_modules directory, unless -g is also specified.

If -g is specified, this will be the value of the global prefix. See npm config for more detail.

Example

npm prefix

/usr/local/projects/foo

npm prefix -g

/usr/local

Configuration
