

Linux Ubuntu 26.04 Manual Pages on command 'npm-repo.1'

\$ man npm-repo.1

NPM-REPO(1)

General Commands Manual

NPM-REPO(1)

NAME

npm-repo

Synopsis

<!-- AUTOGENERATED USAGE DESCRIPTIONS -->

Description

This command tries to guess at the likely location of a package's repository URL, and then tries to open it using the --browser config param. If no package name is provided, it will search for a package.json in the current folder and use the repository property.

Configuration
