NPM-ROOT(1)

NAME

npm-root

Synopsis

<!-- AUTOGENERATED USAGE DESCRIPTIONS -->

Description

Print the effective node_modules folder to standard out.

Useful for using npm in shell scripts that do things with the

node_modules folder. For example:

```
#!/bin/bash
```

```
global_node_modules="$(npm root --global)"
```

```
echo "Global packages installed in: ${global_node_modules}"
```
