

Linux Ubuntu 26.04 Manual Pages on command 'odflint.1'

\$ man odflint.1

ODFLINT(1) User commands ODFLINT(1)

NAME

odflint - Check ODF file for problems

SYNOPSIS

odflint path

DESCRIPTION

odflint is a program that will check an ODF file and give warning if it finds something suspect. It is not able to make a full validation due to the complexity of the schema.

?Path? is assumed to be an OpenDocument file of text, spreadsheet or presentation type.

EXAMPLE

odflint odf-file

BUGS

Validates all versions of ODF as if they are version 1.1. You'll therefore get some false positives if you check files that aren't generated by odfpys scripts.
