

Linux Ubuntu 26.04 Manual Pages on command 'papers.1'

\$ man papers.1

papers(1) General Commands Manual papers(1)

NAME

papers - GNOME document viewer

The Papers Document Viewer application for the GNOME desktop environment

SYNTAX

papers [--help] [--page-label=PAGE | --page-index=NUMBER | --named-dest=DEST] [--fullscreen]
[--presentation] [filename(s)...]

DESCRIPTION

Papers is a document viewer capable of displaying multiple and single page document formats like PDF and DjVu. For more general information about Papers please visit our website at <https://apps.gnome.org/Papers/>

OPTIONS

-, -h, --help

Prints the command line options.

-p, --page-label=PAGE

Open the document on the page with the specified page label (or page number).

-i, --page-index=NUMBER

Open the document on the page with the specified page index (this is the exact page number, not a page label).

-n, --named-dest=DEST

Open the document on the specified named destination.

-f, --fullscreen

Run papers in fullscreen mode.

-s, --presentation

Run papers in presentation mode.

filename(s)...

Specifies the file to open when Papers starts. If this is not specified, Papers will open a blank window. Multiple files can be loaded if they are separated by spaces. Papers also supports handling of remote files. For example, you can pass the location on the web or load a file from a FTP server, like "ftp://adobe.com/sample.pdf".

BUGS

If you find a bug, please report it at <https://gitlab.gnome.org/GNOME/papers/issues>.
