Linux Ubuntu 26.04 Manual Pages on command 'perf-version.1'

\$ man perf-version.1

PERF-VERSION(1)	perf Manual	PERF-VERSION(1)
-----------------	-------------	-----------------

NAME

perf-version - display the version of perf binary

SYNOPSIS

perf version [--build-options]

DESCRIPTION

With no options given, the perf version prints the perf version on the standard output.

If the option --build-options is given, then the status of compiled-in libraries are printed on the standard output.

OPTIONS

--build-options

Prints the status of compiled-in libraries on the standard output.

perf	05/25/2026	PERF-VERSION(1)
