pthread_attr_setstackaddr(3) Library Functions Manual pthread_attr_setstackaddr(3)

NAME

pthread_attr_setstackaddr, pthread_attr_getstackaddr - set/get stack address attribute in thread attributes object

LIBRARY

POSIX threads library (libpthread, -lpthread)

SYNOPSIS

```
#include <pthread.h>
```

```
[[deprecated]]
```

```
int pthread_attr_setstackaddr(pthread_attr_t *attr, void *stackaddr);
```

```
[[deprecated]]
```

```
int pthread_attr_getstackaddr(const pthread_attr_t *restrict attr,  
                             void **restrict stackaddr);
```

DESCRIPTION

These functions are obsolete: do not use them. Use `pthread_attr_setstack(3)` and `pthread_attr_getstack(3)` instead.

The `pthread_attr_setstackaddr()` function sets the stack address attribute of the thread at? tributes object referred to by `attr` to the value specified in `stackaddr`. This attribute specifies the location of the stack that should be used by a thread that is created using the thread attributes object `attr`.

`stackaddr` should point to a buffer of at least `PTHREAD_STACK_MIN` bytes that was allocated by the caller. The pages of the allocated buffer should be both readable and writable.

The `pthread_attr_getstackaddr()` function returns the stack address attribute of the thread

RETURN VALUE

ERRORS

ATTRIBUTES

[illegible][illegible][illegible]

STANDARDS

None.

HISTORY

`glibc 2.1`. Marked obsolete in POSIX.1-2001. Removed in POSIX.1-2008.

NOTES

Do not use these functions! They cannot be portably used, since they provide no way of specifying the direction of growth or the range of the stack. For example, on architectures with a stack that grows downward, `stackaddr` specifies the next address past the highest address of the allocated stack area. However, on architectures with a stack that grows upward, `stackaddr` specifies the lowest address in the allocated stack area. By contrast, the `stackaddr` used by `pthread_attr_setstack(3)` and `pthread_attr_getstack(3)`, is always a pointer to the lowest address in the allocated stack area (and the `stacksize` argument specifies the range of the stack).
