pthread_testcancel(3) Library Functions Manual pthread_testcancel(3)

NAME _____

pthread_testcancel - request delivery of any pending cancelation request

LIBRARY

POSIX threads library (libpthread, -lpthread)

SYNOPSIS

```
#include <pthread.h>
```

```
void pthread_testcancel(void);
```

DESCRIPTION

Calling `pthread_testcancel()` creates a cancellation point within the calling thread, so that a thread that is otherwise executing code that contains no cancellation points will respond to a cancellation request.

If cancelability is disabled (using `pthread_setcancelstate(3)`), or no cancellation request is pending, then a call to `pthread_testcancel()` has no effect.

RETURN VALUE

This function does not return a value. If the calling thread is canceled as a consequence of a call to this function, then the function does not return.

ERRORS

This function always succeeds.

ATTRIBUTES

For an explanation of the terms used in this section, see [attributes\(7\)](#).
