

Linux Ubuntu 26.04 Manual Pages on command 'pw-dump.1'

\$ man pw-dump.1

pw-dump(1) General Commands Manual pw-dump(1)

NAME

pw-dump - The PipeWire state dumper

SYNOPSIS

pw-dump [options]

DESCRIPTION

The pw-dump program produces a representation of the current PipeWire state as JSON, including the information on nodes, devices, modules, ports, and other objects.

OPTIONS

-h | --help

Show help.

-r | --remote=NAME

The name of the remote instance to dump. If left unspecified, a connection is made to the default PipeWire instance.

-m | --monitor

Monitor PipeWire state changes, and output JSON arrays describing changes.

-N | --no-colors

Disable color output.

-C | --color=WHEN

Whether to enable color support. WHEN is never, always, or auto.
