

Linux Ubuntu 26.04 Manual Pages on command 'readlink.1'

\$ man readlink.1

READLINK(1) General Commands Manual READLINK(1)

NAME

readlink - Print value of a symbolic link or canonical file name.

SYNOPSIS

```
readlink  [-f|--canonicalize] [-e|--canonicalize-existing] [-m|--canonicalize-missing]
          [-n|--no-newline] [-q|--quiet] [-s|--silent] [-v|--verbose] [-z|--zero] [-h|--help]
          [-V|--version] [files]
```

DESCRIPTION

Print value of a symbolic link or canonical file name.

OPTIONS

-f, --canonicalize

canonicalize by following every symlink in every component of the given name recursively; all but the last component must exist

-e, --canonicalize-existing

canonicalize by following every symlink in every component of the given name recursively; all components must exist

-m, --canonicalize-missing

canonicalize by following every symlink in every component of the given name recursively, without requirements on components existence

-n, --no-newline

do not output the trailing delimiter

-q, --quiet

suppress most error messages

-s, --silent

suppress most error messages

-v, --verbose

report error message

-z, --zero

separate output with NUL rather than newline

-h, --help

Print help

-V, --version

Print version

[files]
