REGISTER-PYTHON-ARGCOMPLETE(1) User Commands REGISTER-PYTHON-ARGCOMPLETE(1)

NAME

register-python-argcomplete - register-python-argcomplete - argcomplete utility script

DESCRIPTION

usage: register-python-argcomplete [-h] [--no-defaults]

[--complete-arguments ...]

[-s {bash,zsh,tcsh,fish,powershell}] [-e EXTERNAL_ARGCOMPLETE_SCRIPT] executable [ex?

ecutable ...]

Register a Python executable for use with the argcomplete module.

To perform the registration, source the output of this script in your bash shell (quote the output to avoid interpolation).

Example:

```
$ eval "$(register-python-argcomplete my-favorite-script.py)"
```

For Tcsh

```
$ eval `register-python-argcomplete --shell tcsh my-favorite-script.py`
```

For Fish

```
$ register-python-argcomplete --shell fish my-favourite-script.py > ~/.con?
```

```
fig/fish/my-favourite-script.py.fish
```

positional arguments:

executable

executable to completed (when invoked by exactly this name)

options:

-h, --help

show this help message and exit

--no-defaults

when no matches are generated, do not fallback to readline's default completion (affects bash only)

--complete-arguments ...

arguments to call complete with; use of this option discards default options (affects bash only)

-s {bash,zsh,tcsh,fish,powershell}, --shell {bash,zsh,tcsh,fish,powershell}

output code for the specified shell

-e EXTERNAL_ARGCOMPLETE_SCRIPT, --external-argcomplete-script EXTERNAL_ARGCOMPLETE_SCRIPT

external argcomplete script for auto completion of the executable

AUTHORS

argcomplete module was written by Andrey Kislyuk
