shotwell(1) General Commands Manual shotwell(1)

NAME

shotwell - Digital photo manager

SYNOPSIS

shotwell [OPTION]... [FILE]

DESCRIPTION

Shotwell is a digital photo organizer designed for the GNOME desktop environment. It allows you to import photos from disk or camera, organize them in various ways, view them in full-window or fullscreen mode, and export them to share with others.

OPTIONS

-h, --help Show help options

-d, --datadir=FOLDER

Path to Shotwell's private data. Using -d stand-alone without --profile --create is considered deprecated and should not be used anymore.

--no-runtime-monitoring

Do not monitor library folder at runtime for changes

-f, --fullscreen

Open the viewer mode in fullscreen. Has no effect in library mode.

--no-startup-progress

Don't display startup progress meter

-V, --version

Show the application's version

--display=DISPLAY

X display to use

-p, --show-metadata

Dump all Exif, IPTC and XMP metadata of FILE

-i, --profile=PROFILE

Start shotwell with a different profile. A profile consists of a set of settings and a new private data dir. The data dir can be overridden by specifying --datadir as well.

-l, --list-profiles

Show the available profiles

-b, --profile-browser

Show the available profiles in a dialog, with managing capabilities and the ability to start Shotwell with a specific profile by double-clicking.

EXAMPLES

shotwell

Opens Shotwell with the user's library.

shotwell FILE

Opens an image file for direct editing. File is not imported into library and unsaved changes are lost on close.

shotwell --profile="Development environment"

Opens shotwell using the profile named "Development environment".
