

Linux Ubuntu 26.04 Manual Pages on command 'showrgb.1'

\$ man showrgb.1

SHOWRGB(1) General Commands Manual SHOWRGB(1)

NAME

showrgb - display an rgb color-name database

SYNOPSIS

showrgb [database]

DESCRIPTION

The showrgb program reads an rgb color-name database from a text file and converts it back to source form, printing the result to standard output. The default database is the one that X was built with, and may be overridden on the command line. Specify the database name without the .txt, .pag or .dir suffix.

FILES

/usr/share/X11/rgb default database.

X Version 11 rgb 1.1.0 SHOWRGB(1)
