

Linux Ubuntu 26.04 Manual Pages on command 'sysprof.1'

\$ man sysprof.1

SYSPROF(1)

General Commands Manual

SYSPROF(1)

NAME

sysprof, sysprof-cli - System-wide Linux Profiler

SYNOPSIS

sysprof [--version] [filename]

sysprof-cli filename

DESCRIPTION

sysprof is a sampling CPU profiler for Linux that uses ftrace to profile the entire system, not just a single application. Sysprof handles shared libraries and applications do not need to be recompiled. In fact they don't even have to be restarted.

sysprof can be used to analyze saved profile data. filename parameter to sysprof can be used to load saved profile data. Alternatively Profiler->Open menu can be used to open a file.

sysprof-cli is command-line tool to collect profiling data to filename.

OPTIONS

--version

Version. Display the version number.

AUTHOR

sysprof was written by Soren Sandmann <sandmann@redhat.com>.

This manual page was written by Samuel Mimram <smimram@debian.org>, for the Debian project (but may be used by others).
