SYSTEMD-SSH-ISSUE(1)                      systemd-ssh-issue                      SYSTEMD-SSH-ISSUE(1)

### NAME

systemd-ssh-issue - Generator for SSH login prompt drop-ins

### SYNOPSIS

/usr/lib/systemd/systemd-ssh-issue --make-vsock/usr/lib/systemd/systemd-ssh-issue --rm-vsock

### DESCRIPTION

systemd-ssh-issue is a small tool that generates a /run/issue.d/50-ssh-vsock.issue drop-in file in case AF\_VSOCK support is available in the kernel and the VM environment. The file contains brief information about how to contact the local system via SSH-over-AF\_VSOCK, in particular it reports the system's AF\_VSOCK CID. The file is typically read and displayed by agetty(8) on console or serial login prompts.

This tool is automatically used by systemd-ssh-generator(8) in the AF\_VSOCK socket units it generates.

### OPTIONS

The following options are understood:

--make-vsock

Generates the issue file. This command has no effect if called on systems lacking AF\_VSOCK support.

Added in version 258.

--rm-vsock

Removes the issue file if it exists.

Added in version 258.

--issue-path=

Changes the path to the issue file to write to/remove. If not specified, defaults to /run/issue.d/50-ssh-vsock.issue. If specified as empty string or "-" writes the issue file contents to standard output.

Added in version 258.

-h, --help

Print a short help text and exit.

--version

Print a short version string and exit.

## EXIT STATUS

On success, 0 is returned, a non-zero failure code otherwise.
