

Linux Ubuntu 26.04 Manual Pages on command 'tload.1'

\$ man tload.1

TLOAD(1) User Commands TLOAD(1)

NAME

tload - graphic representation of system load average

SYNOPSIS

tload [options] [tty]

DESCRIPTION

tload prints a graph of the current system load average to the specified tty (or the tty of the tload process if none is specified).

OPTIONS

-s, --scale number

The scale option allows a vertical scale to be specified for the display (in characters between graph ticks); thus, a smaller value represents a larger scale, and vice versa.

-d, --delay seconds

The delay sets the delay between graph updates in seconds.

-h, --help

Display this help text.

-V, --version

Display version information and exit.

FILES

/proc/loadavg load average information

SEE ALSO

ps(1), top(1), uptime(1), w(1)

BUGS

The -d delay option sets the time argument for an alarm(2); if -d 0 is specified, the alarm is set to 0, which will never send the SIGALRM and update the display.

AUTHORS

Branko Lankester, David Engel, Michael K. Johnson.
