\$ man ubuntu-insights_upload.1

Ubuntu-insights: ubuntu-insights(1)

Ubuntu-insights: ubuntu-insights(1)

NAME

ubuntu-insights-upload - Upload metrics to the Ubuntu Insights server

SYNOPSIS

ubuntu-insights upload sources ?optional arguments? [flags]

DESCRIPTION

Upload metrics to the Ubuntu Insights server.

If no sources are provided, all detected sources at the configured reports directory will be uploaded. If `consent` is not given for a source, an opt-out notification will be sent regardless of the locally cached insights report's contents.

OPTIONS

`-d, --dry-run[=false]` go through the motions of doing an upload, but do not communicate with the server, send the payload, or modify local files

`-f, --force[=false]` force an upload, ignoring min age and clashes between the collected file and a file in the uploaded folder, replacing the clashing uploaded report if it exists (doesn't ignore consent)

-h, --help[=false] help for upload

--min-age=604800 the minimum age (in seconds) of a report before the uploader will attempt to upload it

-r, --retry[=false] enable a limited number of retries for failed uploads

OPTIONS INHERITED FROM PARENT COMMANDS

--config="" use a specific configuration file

--consent-dir="" the base directory of the consent state files

--insights-dir="" the base directory of the insights report cache

--quiet[=false] suppress all output except errors

-v, --verbose[=0] issue INFO (-v), DEBUG (-vv)
