NAME _____

upower - UPower command line tool

SYNOPSIS

```
upower [--battery] [--dump] [--enumerate] [--monitor-detail] [--monitor] [--show-info]
      [--version] [--help]
```

DESCRIPTION

upower is a simple command line client for the UPower(7) daemon.

OPTIONS

-b, --battery

Dump all parameters for battery devices.

-d, --dump

Dump all parameters for all devices.

-e, --enumerate

Enumerate the object paths of all devices on the system.

-m, --monitor

Connect to the UPower daemon and print a line every time a power source is added, removed or changed.

```
--monitor-detail
```

Like --monitor but prints the full details of the power source whenever an event happens.

-i, --show-info OBJECT_PATH

Show information about the given device.

-v, --version

Print version information for the client and daemon.

-h, --help

Show help options.
