NAME

usbreset - send a USB port reset to a USB device

SYNOPSIS

usbreset [device]

DESCRIPTION

usbreset is a utility that performs resets on USB devices. It is particularly useful for situations where a USB device is unresponsive or exhibits erratic behavior. The USB device to be reset can be specified in one of three formats:

VVVV:PPPP

Reset by vendor and product IDs

BBB/DDD

Reset by bus and device number

SN:SERIAL

Reset by serial number

Product

Reset by product name

When run without any arguments, `usbreset` provides usage information and a list of connected USB devices, including their vendor and product IDs, bus and device numbers, and product names.

RETURN VALUE

If the specified device is not found, a non-zero exit code is returned.

EXAMPLES

Reset device with vendor ID 1234 and product ID 5678:

```
usbreset 1234:5678
```

Reset device 002 on bus 001:

```
usbreset 001/002
```

Reset device with serial number ABCDEF0

```
usbreset SN:ABCDEF0
```

Reset device named USB2.0 Hub:

```
usbreset "USB2.0 Hub"
```

SEE ALSO

`lsusb(8)`.
