

Linux Ubuntu 26.04 Manual Pages on command 'wat-desugar.1'

\$ man wat-desugar.1

WABT(1) General Commands Manual WABT(1)

NAME

wat-desugar ? parse .wat text form and print canonical flat format

SYNOPSIS

wat-desugar [options] file

DESCRIPTION

wat-desugar Parses .wat text form as supported by the spec interpreter (s-expressions, flat syntax, or mixed) and prints "canonical" flat format.

The options are as follows:

--help Print this help message

--version

Print version information

-o, --output=FILE

Output file for the formatted file

--debug-parser

Turn on debugging the parser of wat files

-f, --fold-exprs

Write folded expressions where possible

--inline-exports

Write all exports inline

--inline-imports

Write all imports inline

--enable-exceptions

Enable Experimental exception handling

--disable-mutable-globals

Disable Import/export mutable globals

--disable-saturating-float-to-int

Disable Saturating float-to-int operators

--disable-sign-extension

Disable Sign-extension operators

--disable-simd

Disable SIMD support

--enable-threads

Enable Threading support

--enable-function-references

Enable Typed function references

--disable-multi-value

Disable Multi-value

--enable-tail-call

Enable Tail-call support

--disable-bulk-memory

Disable Bulk-memory operations

--disable-reference-types

Disable Reference types (externref)

--enable-annotations

Enable Custom annotation syntax

--enable-code-metadata

Enable Code metadata

--enable-gc

Enable Garbage collection

--enable-memory64

Enable 64-bit memory

--enable-multi-memory

Enable Multi-memory

--enable-extended-const

Enable Extended constant expressions

--enable-all

Enable all features

--generate-names

Give auto-generated names to non-named functions, types, etc.

EXAMPLES

Write output to stdout

```
$ wat-desugar test.wat
```

Write output to test2.wat

```
$ wat-desugar test.wat -o test2.wat
```

Generate names for indexed variables

```
$ wat-desugar --generate-names test.wat
```
