\$ man wcscat.3

wcscat(3) Library Functions Manual wcscat(3)

NAME _____

wcscat - concatenate two wide-character strings

LIBRARY

Standard C library (libc, -lc)

SYNOPSIS

```
#include <wchar.h>
```

```
wchar_t *wcscat(wchar_t *restrict dest, const wchar_t *restrict src);
```

DESCRIPTION

The `wcscat()` function is the wide-character equivalent of the `strcat(3)` function. It copies the wide-character string pointed to by `src`, including the terminating null wide character (`L'\0'`), to the end of the wide-character string pointed to by `dest`.

The strings may not overlap.

The programmer must ensure that there is room for at least `wcslen(dest)+wcslen(src)+1` wide characters at `dest`.

RETURN VALUE

wcscat() returns dest.

ATTRIBUTES

For an explanation of the terms used in this section, see `attributes(7)`.

[illegible]

?	Interface	?	Attribute	?	Value	?
---	-----------	---	-----------	---	-------	---

[illegible]

? wscat() ? Thread safety ? MT-Safe ?
