

Linux Ubuntu 26.04 Manual Pages on command 'zfgrep.1'

\$ man zfgrep.1

ZGREP(1) General Commands Manual ZGREP(1)

NAME

zgrep - search possibly compressed files for a regular expression

SYNOPSIS

zgrep [grep_options] [-e] pattern filename...

DESCRIPTION

The `zgrep` command invokes `grep` on compressed or gzipped files. All options specified are passed directly to `grep`. If no file is specified, then the standard input is decompressed if necessary and fed to `grep`. Otherwise the given files are uncompressed if necessary and fed to `grep`.

If the `GREP` environment variable is set, `zgrep` uses it as the `grep` program to be invoked.

EXIT STATUS

Exit status is 0 for a match, 1 for no matches, and 2 if trouble.

BUGS

The following `grep` options are not supported: `--dereference-recursive` (`-R`), `--directories` (`-d`), `--exclude`, `--exclude-from`, `--exclude-dir`, `--include`, `--null` (`-Z`), `--null-data` (`-z`), and `--recursive` (`-r`).
