

NAME

XtCreateApplicationShell – create top-level widget instance

SYNTAX

Widget XtCreateApplicationShell(String *name*, WidgetClass *widget_class*, ArgList *args*, Cardinal *num_args*);

ARGUMENTS

<i>name</i>	Specifies the name of the shell.
<i>args</i>	Specifies the argument list to override any other resource specifications.
<i>num_args</i>	Specifies the number of arguments in the argument list.

DESCRIPTION

The procedure **XtCreateApplicationShell** calls **XtAppCreateShell** with the *application* NULL, the application class passed to **XtInitialize**, and the default application context created by **XtInitialize**. This routine has been replaced by **XtAppCreateShell**.
