

**NAME**

XtSessionGetToken, XtSessionReturnToken – token management for checkpointing

**SYNTAX**

```
XtCheckpointToken XtSessionGetToken(Widget w, int type);  
void XtSessionReturnToken(XtCheckpointToken token);
```

**ARGUMENTS**

<i>w</i>	Specifies the session widget.
<i>type</i>	Specifies the value in the type field of the token.
<i>token</i>	Specifies the token to be returned.

**DESCRIPTION**

The **XtSessionGetToken** function will return NULL if the checkpoint operation instigated by the session manager is not currently under way.

To indicate the completion of a deferred save operation and to return the checkpoint token use **XtSession-ReturnToken**.
