NAME

containerd−config − information on the containerd config

SYNOPSIS

containerd config [command]

DESCRIPTION

The *containerd config* command has one subcommand, named *default*, which will display on standard output the default containerd config for this version of the containerd daemon.

This output can be piped to a **containerd−config.toml(5)** file and placed in **/etc/containerd** to be used as the configuration for containerd on daemon startup. The configuration can be placed in any filesystem location and used with the **−−config** option to the containerd daemon as well.

See **containerd−config.toml(5)** for more information on the containerd configuration options.

OPTIONS

default : This subcommand will output the TOML formatted containerd configuration to standard output

BUGS

Please file any specific issues that you encounter at

⟨https://github.com/containerd/containerd⟩.
