

**NAME**

devlink – Devlink tool

**SYNOPSIS**

**devlink** [ *OPTIONS* ] { *dev*|*port*|*monitor*|*sb*|*resource*|*region*|*health*|*trap* } { *COMMAND* | **help** }

**devlink** [ **-force** ] **-batch** *filename*

**OPTIONS****-V, --Version**

Print the version of the **devlink** utility and exit.

**-b, --batch <FILENAME>**

Read commands from provided file or standard input and invoke them. First failure will cause termination of devlink.

**-force** Don't terminate devlink on errors in batch mode. If there were any errors during execution of the commands, the application return code will be non zero.

**-n, --no-nice-names**

Turn off printing out nice names, for example netdevice ifnames instead of devlink port identification.

**-j, --json**

Generate JSON output.

**-p, --pretty**

When combined with -j generate a pretty JSON output.

**-v, --verbose**

Turn on verbose output.

**-s, --statistics**

Output statistics.

**-N, --Netns <NETNSNAME>**

Switches to the specified network namespace.

**OBJECT**

**dev** - devlink device.

**port** - devlink port.

**monitor**

- watch for netlink messages.

**sb** - devlink shared buffer configuration.

**resource**

- devlink device resource configuration.

**region** - devlink address region access

**health** - devlink reporting and recovery

**trap** - devlink trap configuration

**COMMAND**

Specifies the action to perform on the object. The set of possible actions depends on the object type. As a rule, it is possible to **show** (or **list**) objects, but some objects do not allow all of these operations or have some additional commands. The **help** command is available for all objects. It prints out a list of available commands and argument syntax conventions.

If no command is given, some default command is assumed. Usually it is **list** or, if the objects of this class cannot be listed, **help**.

**EXIT STATUS**

Exit status is 0 if command was successful or a positive integer upon failure.

**REPORTING BUGS**

Report any bugs to the Network Developers mailing list <[netdev@vger.kernel.org](mailto:netdev@vger.kernel.org)> where the development and maintenance is primarily done. You do not have to be subscribed to the list to send a message there.
