

**NAME**

dh\_perl\_openssl – add dependencies required for OpenSSL modules

**SYNOPSIS**

**dh\_perl\_openssl** [*debhelper options*]

**DESCRIPTION**

dh\_perl\_openssl is a debhelper program that is responsible for adding a dependency on perl-openssl-abi-\* to the `#{perl:Depends}` substitution variable. Such a dependency is needed for packages that expose the OpenSSL binary interface to Perl code, such as pointers to `SSL_CTX` structs.

A debhelper addon is also provided. This makes it possible to just use

```
#!/usr/bin/make -f
%:
    dh $@ --with perl_openssl
```

for *debian/rules*.
