

NAME

dmmp_context_new – Create struct dmmp_context.

SYNOPSIS

```
struct dmmp_context * dmmp_context_new (void);
```

ARGUMENTS

void no arguments

DESCRIPTION

The default logging level (DMMP_LOG_PRIORITY_DEFAULT) is DMMP_LOG_PRIORITY_WARNING which means only warning and error message will be forward to log handler function. The default log handler function will print log message to STDERR, to change so, please use **dmmp_context_log_func_set** to set your own log handler, check manpage libdmmp.h(3) for detail.

RETURN

Pointer of 'struct dmmp_context'. Should be freed by **dmmp_context_free**.
