

**NAME**

dmmp\_mpath\_name\_get – Retrieve name(alias) of certain mpath.

**SYNOPSIS**

```
const char * dmmp_mpath_name_get (struct dmmp_mpath *dmmp_mp);
```

**ARGUMENTS**

dmmp\_mp     Pointer of 'struct dmmp\_mpath'. If this pointer is NULL, your program will be terminated by assert.

**DESCRIPTION**

Retrieve the name (also known as alias) of certain mpath. When the config 'user\_friendly\_names' been set 'no', the name will be identical to WWID retrieved by **dmmp\_mpath\_wwid\_get**.

**RETURN**

const char \*. No need to free this memory, the resources will get freed when **dmmp\_mpath\_array\_free**.
