

NAME

`docker-start` - Start one or more stopped containers

SYNOPSIS

`docker start [OPTIONS] CONTAINER [CONTAINER...]`

DESCRIPTION

Alias for `docker container start`.

OPTIONS

<code>-a, --attach[=false]</code>	Attach STDOUT/STDERR and forward signals
<code>--checkpoint=""</code>	Restore from this checkpoint
<code>--checkpoint-dir=""</code>	Use a custom checkpoint storage directory
<code>--detach-keys=""</code>	Override the key sequence for detaching a container
<code>-h, --help[=false]</code>	help for start
<code>-i, --interactive[=false]</code>	Attach container's STDIN

SEE ALSO

`docker(1)`
