

**NAME**

go-fix – update packages to use new APIs

**SYNOPSIS**

**go fix** [*packages*]

**DESCRIPTION**

Fix runs the Go fix command on the packages named by the import paths.

The `-fix` flag sets a comma-separated list of fixes to run. The default is all known fixes. (Its value is passed to `'go tool fix -r'`.)

For more about fix, see `'go doc cmd/fix'`.

For more about specifying packages, see **go-packages(7)**.

To run fix with other options, run `'go tool fix'`.

**SEE ALSO**

**go-fmt(1)**, **go-vet(1)**.

**AUTHOR**

This manual page was written by Michael Stapelberg <stapelberg@debian.org> and is maintained by the Debian Go Compiler Team <team+go-compiler@tracker.debian.org> based on the output of `'go help fix'` for the Debian project (and may be used by others).
