

NAME

go – tool for managing Go source code

SYNOPSIS

go fmt [-n] [-x] [*packages*]

DESCRIPTION

Fmt runs the command 'gofmt -l -w' on the packages named by the import paths. It prints the names of the files that are modified.

For more about gofmt, see 'godoc gofmt'.

For more about specifying packages, see **go-packages(7)**.

To run gofmt with specific options, run gofmt itself.

OPTIONS

-n The -n flag causes tool to print the command that would be executed but not execute it.

-x The -x flag causes clean to print remove commands as it executes them.

SEE ALSO

go-doc(1), **go-fix(1)**, **go-vet(1)**.
