

NAME

gvfsd-fuse – Fuse daemon for gvfs

SYNOPSIS

gvfsd-fuse PATH

DESCRIPTION

gvfsd-fuse maintains a fuse mount to make gvfs backends available to POSIX applications. The mount point for the fuse filesystem is provided by the [PATH] argument.

gvfsd-fuse is normally started by **gvfsd**(1). In this case, the mount point is **\$XDG_RUNTIME_DIR/gvfs** or **\$HOME/.gvfs**.

OPTIONS

-d

Enable fuse debug output. This implies **-f**.

-f

Run in the foreground.

-s

Run single-threaded.

-o OPTION

Set a fuse-specific option. See the fuse documentation for a list of these.

EXIT STATUS

On success 0 is returned, a non-zero failure code otherwise.
