NAME

memmove − copy memory area

SYNOPSIS

#include <string.h>

void *memmove(void *dest**, const void ***src**, size_t** n**);**

DESCRIPTION

The **memmove**() function copies *n* bytes from memory area *src* to memory area *dest*. The memory areas may overlap: copying takes place as though the bytes in *src* are first copied into a temporary array that does not overlap *src* or *dest*, and the bytes are then copied from the temporary array to *dest*.

RETURN VALUE

The **memmove**() function returns a pointer to *dest*.

ATTRIBUTES

For an explanation of the terms used in this section, see **attributes**(7).

Interface	Attribute	Value
memmove()	Thread safety	MT-Safe

CONFORMING TO

POSIX.1-2001, POSIX.1-2008, C89, C99, SVr4, 4.3BSD.
