

NAME

nm-initrd-generator – early boot NetworkManager configuration generator

SYNOPSIS

nm-initrd-generator [*OPTIONS...*] -- [*CMDLINE...*]

DESCRIPTION

nm-initrd-generator scans the command line for options relevant to network configuration and creates configuration files for an early instance of NetworkManager run from the initial ramdisk during early boot.

OPTIONS

-c | **--connections-dir** *path*

Output connection directory.

-d | **--sysfs-dir** *path*

The sysfs mount point.

-s | **--stdout**

Dump connections to standard output. Useful for debugging.

CMDLINE

The options that appear on the kernel command line. The following options are recognized:

ip

rd.route

bridge

bond

team

vlan

bootdev

nameserver

rd.peerdns

rd.bootif

BOOTIF

Please consult the **dracut.cmdline(7)** manual for the documentation of the precise format of the values supported.

EXIT STATUS

nm-initrd-generator exits with status 0. It ignores unrecognized options and prints an error message if it encounters a malformed option.

SEE ALSO
