

NAME

qemu-make-debian-root – Create a debian root image for qemu

SYNOPSIS

qemu-make-debian-root [-k] [-s] *size-in-MiB distrib deburl image [files-to-copy-in-/root]*

DESCRIPTION

qemu-make-debian-root is a command to ease the creation of a debian root image for qemu. The generated image is not bootable by itself, and an external kernel is needed. It can be run with a command like:

```
qemu disk.img -kernel /boot/vmlinuz
```

OPTIONS

-k Keep file system.
-s Create a sparse image.

SEE ALSO

qemu(1), **qemu-img(1)**.
