NAME

rdflib − manage a library file for use with ldrdf(1)

SYNOPSIS

rdflib *command arguments*

DESCRIPTION

rdflib manages a library file which can be used by **ldrdf**(1). It is supplied with a shell script **makelib** which should probably be used to create libraries.

COMMANDS

c *library-file*

Create (or truncate) a library.

a *library-file object-file module*

Add the *object-file* to the library under the name *module*.

x *library-file module object-file*

Extract a *module* from the library to the file *object-file*.

t library-file

Display a list of modules in the library.

NOTES

A remove command will be added soon.
