

**NAME**

**sln** – create symbolic links

**SYNOPSIS**

**sln** *source dest*

**sln** *filelist*

**DESCRIPTION**

The **sln** program creates symbolic links. Unlike the **ln**(1) program, it is statically linked. This means that if for some reason the dynamic linker is not working, **sln** can be used to make symbolic links to dynamic libraries.

The command line has two forms. In the first form, it creates *dest* as a new symbolic link to *source*.

In the second form, *filelist* is a list of space-separated pathname pairs, and the effect is as if **sln** was executed once for each line of the file, with the two pathnames as the arguments.

The **sln** program supports no command-line options.

**SEE ALSO**

**ln**(1), **ld.so**(8), **ldconfig**(8)

**COLOPHON**
