NAME
xwdtopnm - convert a X11 or X10 window dump file into a portable anymap

SYNOPSIS
xwdtopnm [*xwdfile*]

DESCRIPTION
Reads a X11 or X10 window dump file as input. Produces a portable anymap as output. The type of the output file depends on the input file - if it's black & white, a *pbm* file is written, else if it's grayscale a *pgm* file, else a *ppm* file. The program tells you which type it is writing.

Using this program, you can convert anything on an X workstation's screen into an anymap. Just display whatever you're interested in, do an xwd, run it through xwdtopnm, and then use pnmcut to select the part you want.

BUGS
I haven't tested this tool with very many configurations, so there are probably bugs. Please let me know if you find any.
