PART 2 of 5

CYBER SEC INTRO 101

cyber sec Part 2

Types of Cyber Threats

Malware

Malware refers to malicious software designed to harm or exploit any programmable device or network. It can lead to data theft and system damage.

Ransomware

Ransomware is a type of malware that encrypts files and demands payment for their release. It poses significant risks to individuals and organizations.

Phishing

Phishing attacks aim to trick individuals into providing sensitive information by pretending to be a trustworthy source. This often occurs via email.

Denial-of-Service Attacks

Denial-of-service attacks overwhelm systems, making them unavailable to users. This can disrupt business operations and harm reputations.

cyber sec Intro 101

by as a sun certificate and data encryption so that will prevent them to sniff it but at the same time firewall also prevents a lot of ports when they run in-map or some other tools to just find out what are the ports that are open so the ports by default 1024 system ports are assigned and then additional databases and application they open to ports if a port is an open make sure they go through HTTPS which is time f
